

Mateer 4800MLX Dual Head Automatic Filler

The Mateer 4800MLX filler accurately fills a wide variety of products, including free-flow powders and granules and non-free-flow powders, liquids, creams, pastes, and slurries. Like the 3800, this unit has a conveyor belt and many options that enable PSA to create the ideal dry-product-filling machine for your specific needs. The 4800MLX, however, adds a second head for speeds of up to 30-45 CPM depending on the product and volume being filled.

Key Advantages

- A direct-drive servo motor provides greater efficiency and increased reliability over an electric-powered generator.
- Industry-standard PLC controls, readily supportable by PSA's Customer Support team or local Maintenance, Repair and Operations (MRO) suppliers. Programming is included in the installation of any Mateer filling machine.
- Lifts for packing and bottom-up fill work in conjunction. The container lift prevents blow up over the sides to minimize dust in filling. Bottom-up fill eliminates spillage and eliminates voids when filling a product such as peanut butter or spackling compound.
- PLC controls self-diagnosis problems throughout the production line, pinpointing defects as they arise to increase production uptime
- Quick disconnect/self-aligning hopper support to enable easy changeover and cleanup.
