

# CARR<sup>®</sup>Centritech Separation Systems CARR<sup>®</sup> CELL 8<sup>™</sup>

## **Features**

- Automated continuous separation
- High cell viability
- Single-use separation insert
- Low shear processing
- High cell recovery rates
- Compact, integrated footprint

- Simple and reproducible operation
- PLC with color touch screen control panel
- Password protected user levels
- Remote monitoring/operation via Ethernet Option
- Flow rates ranging from 6 to 120 liters per hour
- Variable g force up to 320 x g

BW Packaging Systems represents the collective capabilities of Barry-Wehmiller packaging companies including, Accraply, BW Flexible Systems, BW Integrated Systems, Pneumatic Scale Angelus and Synerlink. Through their diverse capabilities, these companies can collectively provide everything from a single piece of equipment to fully integrated packaging systems for a wide range of industries, including: food and beverage, personal care, container manufacturing, pharmaceutical and medical devices, household products, paper products and textiles, industrial and automotive, and converting, printing and publishing. For more information, go to *BWPackagingSystems.com* 

# CARR<sup>®</sup>Centritech Separation Systems CARR<sup>®</sup> CELL 8<sup>™</sup>

#### The Next Generation in Bioprocessing

Pneumatic Scale Angelus' next generation CELL 8 Separation System utilizes a gamma irradiated, single-use insert to create a gentle, continuous flow centrifuge for mammalian and insect cell processing. The CELL 8 continues our leading capacity to concentrate cells and clarify media and perfusion.

Cells are pumped peristaltically from the bioreactor into the CELL 8<sup>TM</sup> Insert, where the centrifuge process gently separates viable cells, dead cells, cell debris, or clarified liquid. During perfusion, live cells can be recycled automatically into bioreactor, resulting in increased cell density and product yield.

Separation occurs entirely within a gamma-irradiated, single-use separation insert and tubing system, referred to as a Separation Insert. The Separation Insert allows for a single-use, closed-system process, eliminating the potential for contamination and product leakage, as well as a rapid changeover. A three-step process of separation, isolation, and discharge controls the sedimentation rate of the cells as well as the flow rate and direction of the fluid streams entering and leaving the separation chamber. An inflatable barrier segregates the cell-rich material from the supernatant, ensuring a complete discharge of cells during each cycle.

### The CELL 8 offers the following advantages:

- Single-use and rapid changeover
- · Gentle separation of mammalian and insect cells
- Drive train structure eliminates seals and minimizes vibration
- Efficient cooling eliminates thermal impact on cell processing
- Bleed function for improved perfusion processing
- User-friendly and convenient, low maintenance requirements
- Full networking capability for effective data communication
- Reduced validation procedures
